

# BVK 260 – THE CONTINUOUS VERTICAL FORM-, FILL- AND SEAL MACHINE

with an output  
rate of up to  
**120**  
bags/minute

chunky,  
granulated or  
powdery – with highest  
bag and sealed  
seam quality

## PROVEN AND RELIABLE

**With a convincing price/performance ratio**

- highest product safety using proven and reliable machine technology
- processing of various mono films and laminated films using vacuum assisted film feed belts
- high bag quality using a patented process for continuous bag manufacturing

**ROVEMA**

Passion for packaging

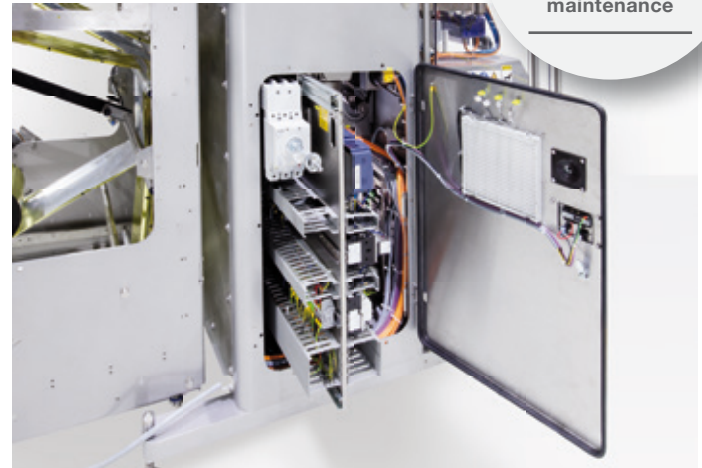

# BVK 260 – THE CONTINUOUS VERTICAL FORM-, FILL- AND SEAL MACHINE

Ideal for standard bag shapes like pillow bags and block bottom bags.

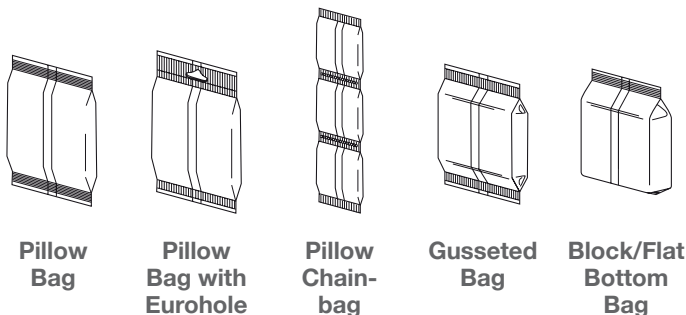

The **BVK 260** can pack a diverse range of products – lumpy, granular or powdered – using the highest bag and sealed seam quality. Depending on the specific product, the machine will be combined with a volumetric cup filler, auger feeder or a multihead weigher.

The control cabinet is integrated in the machine housing on a sliding mounting plate. This ensures good accessibility for electrical and pneumatic maintenance and reduces the machine's floor space.

With an output performance up to 120 bags/minute and format sizes ranging from 60mm to 260mm, the **BVK 260** is the ideal form-, fill- and seal machine for standard bag styles such as pillow bags and block bottom bags.

good  
accessibility for  
electrical and  
pneumatic  
maintenance

## Additional equipment

- extension of the film reel carrier, additional film spindle
- cutting and splicing table
- add-on module for printers and labelers
- automatic film edge control
- air conditioning unit for environment temperature > 35 °C
- electrical synchronization with multihead weighers, volumetric feeders, printers, labelers
