

Clutch for Film Drive of MVP/VPM Machines

Dear customer,

Our top priority is to promptly and reliably supply every ROVEMA machine, independent of its year of manufacture, with service and spare parts.

Based on experience we know that especially components of older machine types potentially involve a risk regarding delivery time (8-10 weeks) and availability. These components are produced in gradually decreasing batches at increasing cost, which considerably influences price stability.

Against this background and due to the decrease in demand during the past years, we decided to cease the constant stockpiling of the clutch for the film drive of MVP/VPM machines (used up until approx. 20 years ago) after selling the current inventory.

Therefore we would like to offer you the possibility of acquiring the clutch with ROVEMA part number **04022452** at a special price within the context of a promotion.

Description of clutch no. 04022452:

- used in the assembly group „film transport“ of ROVEMA MVP/VPM machines
- coupling function for the film drive
- coupling via 24V switch relay of the mechanical cam switch unit, optionally via photo cell for detection of bag length

Our promotion offers you:

- price advantage in the context of a special promotion
- short-term availability since deliverable ex stock (while stocks last)
- prevention of production loss through storage or preventive exchange of the clutch
- constant functioning of the machine

view clutch no. 04022452

We will gladly issue an offer for installation and start-up (duration approx. 1 day) on site at your ROVEMA machine.

For more information about the clutch for the film drive of MVP/VPM machines as well as prices and delivery times or in case of questions regarding your ROVEMA packaging machine your contact persons at ROVEMA service are always at your disposal.
