

Lifting Device for Film Rolls

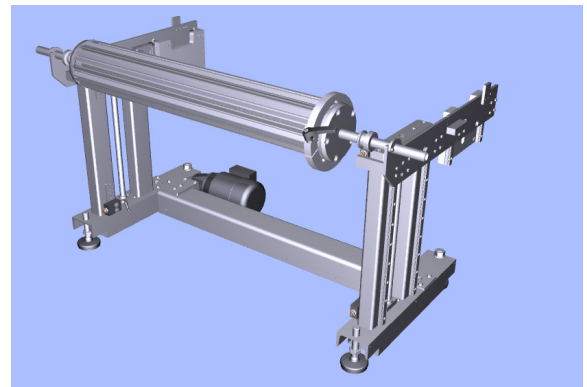

Dear customer,

The creation of safe and ergonomic working conditions for operating and maintenance personnel is a declared goal of many companies worldwide.

The new lifting device for film rolls for your ROVEMA form, fill and seal machine is a helpful tool which considerably reduces both the accident risk as well as the health burden for your operating personnel. At the same time it shortens the set-up time for film roll changes. With this motor-driven device, heavy film rolls with a weight of sometimes more than 100 kg can be effortlessly lifted to their designated position in the reel carrier of the machine. The lifting device is especially suited for large-scale machines, film rolls with a diameter of 600 mm and heavy multilayered film types with metal content.

The lifting device for film rolls offers you:

- increase of occupational safety
- reduction of health burden for your operating personnel
- considerable reduction of set-up time
- gentle handling of sensitive packaging materials
- easy operation with automatic switch-off

The retrofit kit “lifting device” contains:

- lifting device with pedestal
- motor-driven spindle adjustment
- operator button for up and down movement
- sampler for automatic switch-off
- connection material and accessories
