

Memory Space Upgrade to 1.000 Recipes

Dear customer,

By now, due to its flexibility and ease of use, you are certainly positive about the operating system with touchscreen which has been used in our machines for more than 15 years. We would now like to present to you an upgrade with which you can increase the number of recipes from currently 100 to 1.000 memory spaces. The upgrade creates enough memory space for every product, thus even the smallest differences in filling or packing material can be saved individually. Manual adjustments during changes of product or format due to a lack of memory space belong to the past. The selection of a recipe could optionally be carried out via scanning a bar code with a hand scanner. (only possible for machines with P@ck-Control).

The memory space upgrade offers you:

- more flexibility with the use of your packaging machine
- individual adjustment of the program for each single product
- additional security regarding data loss: in the course of the memory space upgrade a current program-backup of your machine will be saved at ROVEMA
- a product-related adjustment of individual parameters during batch changes is no longer necessary
- as usual, memory spaces for saved and non-rewritable programs

*view recipe administration
on ROVEMA touchscreen*

The memory space upgrade consists of:

- software package for memory space upgrade
- preparation of software
- transmission of the software package via modem*

For more information about the memory space upgrade as well as prices and delivery times or in case of further questions regarding your ROVEMA packaging machine your contact persons at ROVEMA Service are always at your disposal.

Your ROVEMA Service Team

*The software can also be installed on site against a separate charge.
